

Not every mistake in the Emergency Department is equally dangerous.

Explainable AI for Emergency Department Triage

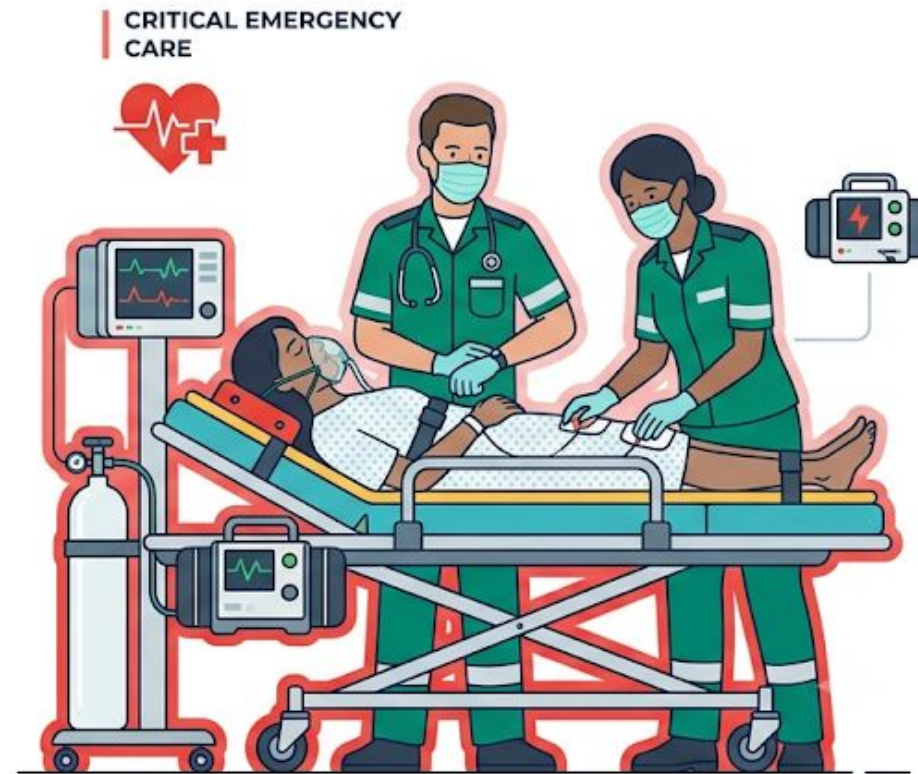

Sariana Ramoutar
CariSurg MedTech Pathways Programme
Healthcare AI Cohort (2026)

Evaluating Clinical Mistakes

Which mistake would worry you more?

- Giving extra attention to the stable patient

- Missing the critically ill patient

| The Baseline Triage Challenge

1 of every 8

The baseline model recognised only about **1 out of every 8** patients who truly needed immediate treatment.

Defining Safety in AI Triage

The safest model isn't the one with the highest accuracy.

It's the one that misses the fewest critically ill patients.

Primary Metric: Recall (ESI Level 1)

Thank You.
